## (54) COMPOSITION FOR PRODUCING ORGANOMONOALKOXYLANE

## (57)Abstract:

PROBLEM TO BE SOLVED: To obtain a composition for producing an organomonoalkoxysilane, comprising an organodisiloxane, an orthocarboxylate ester, a compound bearing a group containing active hydrogen atoms and a catalyst and giving the organomonoalkoxysilane cleanly in high yield under mild conditions.

SOLUTION: An organodisiloxane of the formula (R<sup>1</sup>-R<sup>6</sup> are each a monofunctional hydrocarbon, H), for example, hexamethyldisiloxane, an orthocarboxylate ester such as trimethyl orthoformate, a compound bearing a group containing active hydrogens, for example, water and a catalyst such as concentrated sulfuric acid are mixed to give the objective composition which can produce an organomonoalkoxysilane of high purity in high yield cleanly under mild conditions by stirring the composition at room temperature in a nitrogen atmosphere through a halogen-free process with increased safety.

## LEGAL STATUS

[Date of request for examination] 27.09.2001

[Date of sending the examiner's decision of  
rejection]

[Kind of final disposal of application other

than the examiner's decision of rejection or  
application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's  
decision of rejection]

[Date of requesting appeal against  
examiner's decision of rejection]

[Date of extinction of right]
